

# Agent Powered Performance

Pre-built intelligence. AI-driven action. Designed to move you beyond AI pilot mode.

## Performance gaps— do any of these sound familiar?

- ☐ Still closing the books 2 days late?
- ☐ Holding “just in case” inventory instead of “just in time”?
- ☐ Chasing the same 20% of customers every month while DSO keeps rising?
- ☐ Watching last-minute spot buys erase your sourcing team’s negotiated savings?
- ☐ Running blanket discounts because you can’t see SKU-level elasticity in real time?

## Find hidden value. Act in days. Move the P&L in weeks.

Agent Powered Performance is PwC’s AI driven business engine that helps clients drive efficiency, productivity and accelerates value realization. It scans existing systems and processes to find improvement opportunities, simulates strategies, and takes action to drive quick results. Starting with business outcomes, it leverages PwC’s industry and functional transformation playbooks that have been agentified to give clients a launchpad without starting from scratch.

**Agent Powered Performance is designed to turn transformation from a milestone into a muscle—helping your business improve every day, not just during major transformations.**

### Sense

AI agents scan enterprise data in real time, identifying KPI hotspots, value leakage, and optimization opportunities across finance, operations, supply chain, and customer experience.

### Think

Next, strategic AI agents simulate scenarios and recommend performance levers based on predictive modeling, LLM insights and PwC’s proprietary value models.

### Act

Autonomous AI agents turn strategy into execution—either prompting human action via dashboards or taking direct system-level action in line with your governance standards.

# 88%

of executives are seeing early AI returns—but only 12% are turning them into real value.

These Top Performers are

# 2x

more likely to realize measurable value than their peers

For a purpose-driven company like Veralto, it is essential that our IT systems and AI applications are also purpose-built. Agent Powered Performance has enabled Veralto to further drive operational excellence by helping us conceptualize business outcomes and work backwards to ensure technology enablement.

## A closer look

1

### AI-integrated for continuous improvement

We embed advanced technologies—generative AI, process mining, and machine learning—directly into your existing systems as opposed to having to integrate with something new, so adoption becomes a non-issue — and your people are still in control and focused on what matters most.

2

### Predictive benchmarking for future readiness

Don't just compare to the past—anticipate what “great” will look like tomorrow. Our benchmarking capability uses AI and proprietary data models to simulate future performance scenarios tailored to your business. The result? A forward-looking blueprint that helps you lead, not follow.

3

### Industry-ready models

We bring our transformation experience to you—packaged in data models and industry process blueprints that help you fast-track improvement and deliver value without starting from scratch.

4

### Embedded Fit for Growth methodology

Our Fit for Growth framework helps you align cost structures with strategic priorities, elevate differentiating capabilities, and reinvest where it matters most. It's a smarter way to scale—built for sustained performance.

5

### Anchored on business outcomes

Our methodology starts with your business outcomes—and works backward from there. We align the right KPIs, technology, processes, and operating models to accelerate results and sustain advantage. It's not just about enablement. It's about orchestration, from insight to impact.

## Agent Powered Performance drives business outcomes

- Working with a \$15B+ medical device company to **reduce bad debt** by applying predictive insights to flag invalid purchase orders and enable proactive customer outreach.
- Partnering with a \$20B+ telecom company to **optimize supplier spend** by deploying a smart buying agent that consolidates demand and guides buyers to cost-effective sourcing.
- Working with an \$5B+ energy company to **reduce time to close** by deploying a transaction monitoring and deviation detection agent.

## Start where you are

- Platform? No rip-and-replace required—works with your existing tech stack.
- Perfect Data? Not required.
- Governance? Built with Responsible AI at the core.

## From performance gaps to measurable gains

Whether you're leading growth and strategy, operations, finance or technology—Agent Powered Performance is built to help you move faster, unlock value, and drive impact where it matters most.
